# As easy as 1, 2, 3!

On notification of bad weather, you simply point and press the remote control and Matchsaver is automatically deployed from its storage facility

Just press the forward button on the remote control and the Matchsaver will automatically proceed across the pitch, covering it with a weather-proof, frost resistant sheet.

Within 10 minutes, your pitch is covered and protected from bad weather. No more waiting hours for staff to turn up- **with one remote control, your match can be saved!**

**Dr. Tim Lodge of Agrostis Ltd.**  
**The UK's Leading Turf Consultant**  
 (holder of the only fine turf maintenance and construction orientated PhD in the UK)  
**says:**

'Having seen the Match saver in action I'm convinced this could make a fundamental difference to the way we think about pitch construction.'

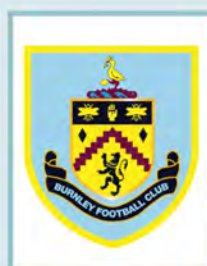

The quick and easy deployment allows the groundsman to finally have some degree of control over the most unpredictable aspect of sports surface management, the rain. Think about this as a tool to manage soil moisture levels and the possibilities expand massively.'

**Giancarlo Revelchione**  
**Director of Sport,**  
**Municipality of Turin.**

The first Match saver cover system was installed at the Delle Alpi Stadium in 2002. Further to great results in maintaining the conditions of the pitch even during bad weather, a second system has now been installed at the Stadio Olimpico.

The system confirmed its performance, in particular the covering and uncovering speed of under 15 minutes, ensuring optimal condition of the pitch for Turin football teams playing at the highest level.

**Doug Metcalfe,**  
**Stadium Manager said;**

'For several seasons, our 'Match saver' cover has prevented numerous league and cup fixtures from being postponed due to adverse weather conditions. Burnley Football Club's Turf Moor Stadium is situated in one of the wettest

parts of the UK, and often is subjected to prolonged and heavy rain fall. Areas of the pitch have been subjected to varying levels of drainage, with local flooding occurring from time to time.

Covering the entire playing surface, the reinforced, waterproof cover is rolled out from goal to goal in a short space of time, allowing precise decisions to be made when the cover is deployed or removed. With the assistance of remote controlled operation, the use of the cover is made simple and utilizes limited resources.

Burnley Football Club have been delighted with the results of the Match saver cover since its installation, and would recommend the product to other clubs who experience similar climatic conditions or suffer from poor draining surfaces.'

**Simon Lee – Head Groundsman**  
**at Somerset County Cricket Club**  
**says:**

'over the course of the last few years our Match saver system has proven to be an invaluable piece of equipment on numerous occasions.'

It has not only allowed us to go ahead with games when the pitch would have usually been unplayable due to water logging after a torrential downpour, but it also allows us to manage the moisture levels within the soil to a

greater degree as part of our grounds care and drainage equipment.

By preventing rain coming into contact with the pitch, we have managed to maintain one of the best surfaces in our sport. It has been reliable, robust and important to us as part of our grounds management equipment.'
